GENERAL INFORMATION AND INSTRUCTIONS

INTRODUCTION . . .

This Master Parts Catalog F-14072 contains replacement parts information for model years 1967 thru 1972.

Before ordering replacement parts, you must first identify the vehicle by its model year and series. Information to assist you is located on pages Ge - 12, Ge - 13 and Ge - 14.

For your convenience, this parts catalog has been issued in two sections. Section one consists of text copy, specific illustrations listing part numbers, Body Miscellaneous and Paks. Section two, the Illustrations Supplement, consists of general illustrations and is under separate cover. It has been assigned form number F-15072.

The two sections have been further subdivided into subsections called groups. These groups list replacement parts for particular areas of the car. An explanation of the make-up of these catalog groups is as follows:

Main units of the car are identified by the number preceding the decimal in any group number. Example:

1. .... ENGINE
2. .... COOLING - GRILLE
3. .... ELECTRICAL - INSTRUMENTS
4. .... FUEL - EXHAUST
5. .... CLUTCH
6. .... STANDARD, OVERDRIVE AND FOURSPEED TRANSMISSION
7. .... SHIFTING
8. .... BRAKES - WHEELS
9. .... REAR AXLE - PROPELLER SHAFT
10. .... FRONT SUSPENSION - POWER STEERING - STEERING GEAR
11. .... ROAD SPRINGS - SHOCKS - REAR SUSPENSION
12. .... HOOD - FENDERS - BUMPERS
13. .... HEATER - AIR CONDITIONING
14. .... CHASSIS MISCELLANEOUS
15. .... ACCESSORIES
16. .... AUTOMATIC TRANSMISSION
17. .... STANDARD PARTS
19. .... HIGH PERFORMANCE EQUIPMENT
20. .... BODY SHEET METAL
22. .... WINDSHIELD WIPER - COWL VENTILATOR - INSTRUMENT PANEL
23. .... DOORS - HARDWARE
24. .... REAR QUARTER HARDWARE
25. .... GLASS - CHANNELS
26. .... BODY MOULDINGS
27. .... BODY HARDWARE
28. .... CONVERTIBLE TOP - SUN ROOF
29. .... SEATS - SOFT TRIM
30. .... BODY MISCELLANEOUS

Individual parts are assigned a group number. The first number identifies the main unit it is affiliated with. Following the decimal is the sub-group number under which all parts of the same name and function are listed. Example: Group 1.059 HEAD, Cylinder..."1." indicates that it is an engine part, ".059" is the sub-group number where part numbers of cylinder heads can be located.

The suffix (example: "-10") should not be interpreted as being part of the group number. It merely serves as a reference number to tie in the Illustrations Supplement callouts with the Text section group numbers.

Although, due to their nature and use, many parts may appear in more than one group in this catalog, each part is assigned an identifying primary group number. This is the number under which the part is priced in the American Motors Parts and Distribution Services Division Price List, listed in the Dealer Parts Order Pad, listed on Parts Storage Location Labels and stored in American Motors Parts and Distribution Services Division Warehouses and Dealerships. Parts should always be ordered by their identifying primary group number, part number and noun name.

The driver's side on Left Hand Drive is the left hand side of the vehicle; on Right Hand Drive it is the right-hand side of the vehicle. This is the governing factor in determining whether a part is left or right hand.

LOCATING PART NUMBERS . . .

GROUP 19 - High Performance ... Same procedure as Group 26.

GROUP 26 - Body Mouldings (Production installed) ... Refer to the Special Information and Illustrations Index by the year at the start of Group 26. Select the illustration title which would most logically include the part you require. Turn to the page indicated by the index and visually locate the part in question. The part number you seek will be found adjacent to the part.

- Body Mouldings (Special Dealer Treatment) ... Ornamentation changes, by dealers, to satisfy individual owner requests have not been cataloged. The dealer assumes the responsibility for correctness of replacement parts.

BALANCE OF GROUPS ... First locate the group number of the part required. Any one of the following three methods can be used:

Method 1: Refer to the Illustrations Index located at the start of Illustrations Supplement F-15072. Select the illustration title which would most logically include the part you require. Turn to the page indicated by the index and visually locate the part in question. The group number you seek will be found adjacent to the part. Locate that group number in the Text section.

Method 2: If the "Noun" name of the part you seek is known, refer to the Alphabetical Index located in the front of the Text section. The group number you seek will be found adjacent to the parts noun name. Locate that group number in the Text section.

Method 3: If the group number of the part you seek is already known, locate that group number in the Text section.

Next, interpret the information listed under the group number as follows:

Year ... This column will indicate the first and last model years to which the part applies (for the application indicated) separated by a slash (/). When a single model year is shown without a slash, it indicates the part was used for that model year only. When a single model year is shown with a slash, it indicates that the part was first used for the model year shown and is continuing to be used during the current model year. For example:

67/68 ... Indicates the part was used for 67 and 68 model years only.
71 ... Indicates the part was used for 71 model year only.
70/ ... Indicates the part was used for 70 thru 72 model years.

On occasion, instead of the above information, the year column will carry the trim number applicable to the part. (For the location of the plate bearing the vehicle's applicable trim number, refer to Vehicle Identification located on page Ge - 11.

Model ... This column carries pertinent information relative to the specific model, series, option, size, type, etc. applicable to the part listed. Abbreviations used can be clarified by referring to the Abbreviations and Codes Index. The absence of a listing in this column indicates the part is applicable to every car, so equipped, built for the model years shown in the "Year" column. Of special importance are those listings which include an asterisk, i.e. (* 11-1). This is meant to refer the reader to the notes appearing on the first page of that respective group. These notes usually pertain to a running change which may have occurred in the parts used to manufacture a given model. This first or "Special Information" page of each group carries special, pertinent information relative to selecting correct parts from those listed within the group.

Paks ... If the part in question happens to be a Package, Assembly, Kit or Set, you will, in many instances, find an illustration reference number in this column. Locate that typical illustration in the Paks section found near the rear of the catalog, and you can visually interpret the content of the part number.

Primary Group Number ... If a part has a primary group number which is different from the one shown in the heading of that group, its correct primary group number will be shown in this column. This is done as a service to those Dealers who bin their parts by the primary group number.

Per Car ... This column will list the number of pieces of a part required for the specific application listed, not the total number of this part which may be used on the entire car.

Part Number ... The number listed in this column is the number by which the part you require must be ordered. Since certain automotive parts are readily available locally, A. M. does not offer them for service replacement. The presence of an NA adjacent to the part number indicates that it is not available from A. M.

ABBREVIATIONS INDEX . . .

The Abbreviations Index is located after the Alphabetical Index. Definitions to descriptive information abbreviated in the catalog, are defined in the index. For Example: WAT..... With Automatic Transmission

ACCESSORIES . . .

Refer to separate Accessories Catalog and Price List.

ALPHABETICAL INDEX . . .

Alphabetical listings followed by a double digit group number indicate that the part may be located in the Illustrated Text section of the group indicated. For Example:

MOULDING, Rear Window Finish 26

Alphabetical listings followed by a group number indicate that the part may be located in the Text copy section of the group indicated. For example:

PUMP ASSEMBLY, Water 2.080-1

GLASS . . .

Glass should be ordered from your American Motors Parts and Distribution Services Division Warehouse.

ILLUSTRATIONS INDEX . . .

The Illustrations Index is located at the front of Illustrations Supplement F-15072. This index has been subdivided into subsections called groups and alphabetized within each group. To use this index, select the illustration title which would most logically describe the part you require. Turn to the page indicated by the index and visually locate the part in question. The group number will be found adjacent to the part. Locate this group number in the text section of the catalog.

"L" CODE . . .

If the ONLY ILLUSTRATION of a part is in a major group, other than that which the part number was located in the Parts Catalog, a visual identification of that part may be obtained by the following method. Refer to the major group number listed after the "L" suffix. Parts illustrated in this manner are identified by the letter "L" in the code column. This group number indicates the major group in the Illustrations Supplement where a visual identification of the part may be found. Select the illustration, within that group, which would most logically include the part required.

MR - MODIFICATION OF PARTS . . .

At various times one service part number is supplied which, when modified by the dealer by cutting, drilling, bending, etc., serves as a replacement for similar parts. Parts supplied in this manner are identified by the letters MR in the code column or in the group heading.

NC - PART SUPPLIED IN NEUTRAL COLOR . . .

At various times one service part number is supplied in a neutral color which, when painted to match by the dealer, serves as a replacement for similar parts. Parts supplied in this manner are identified by the letters NC in the code column or in the group heading.

PARTS NOT LISTED IN THIS CATALOG . . .

Parts not listed in this catalog (except for those listed in another American Motors catalog) are to be considered as not supplied for service by American Motors.

PRICES . . .

Suggested prices for all parts listed in this catalog can be found in separate American Motors Price List F-94064.

Printed in U.S.A.

PRIME PAINTING . . .

Service replacement sheet metal parts are always serviced in prime and certain other categories of parts are serviced in one color only. They are not available from American Motors in finished colors, therefore, dealer must repaint to color desired.

STANDARD PARTS . . .

Standard Parts, Group 17, lists Standard Parts for American Motors Parts and Distribution Services Division Catalogs. Since American Motors does not service all Standard Parts, its purpose is to aid you in locating dimensions so that you may obtain that part locally.

SUBSTITUTED PARTS . . .

If a part has been substituted, the Price List will indicate the replacing part numbers or replacing parts, if available, will be supplied when the original part number is ordered even though the Price List does not indicate the change. Furthermore, as an ordering aid, if substitution information was available for inclusion in the parts catalog for publication date, it has also been listed adjacent to the original part number. However, if it was deemed that it would be more feasible for an individual to obtain particulars from the Price List, the words (Ref. Pr. List) has been printed in place of substituting part numbers.

TRIM NUMBER . . .

Trim items are available by part number. By choosing the applicable description, color or trim number and reading across to the specific model column you will obtain the part number of the required item. Trim numbers having an additional letter suffix such as B, C, D, etc., are used only when the part is peculiar to a particular trim number.

Trim numbers listed without a letter suffix indicate the part applies to all models having a part number entered in its specific model column.

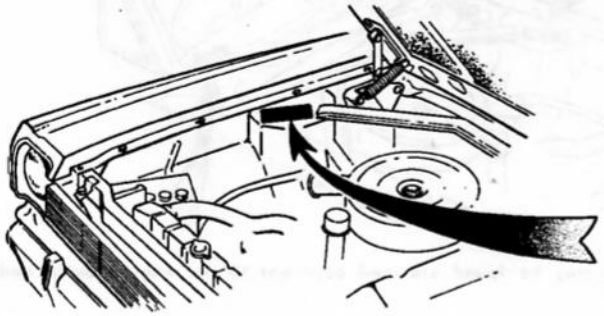

Cloth and vinyl materials used in fabricating trim assemblies, not part of a dielectric insert, are available in bulk form. When ordering, please specify the exact size desired since these materials sold only by the running yard vary in widths of approximately 54 inches to 64 inches.

PAINT . . .

American Motors factory matched touch up paint is available in both Spray Can and Brush Top containers. When larger quantities are required, it is suggested that they be obtained from either of two sources of supply: Ditzler Automotive Finish Division of Pittsburgh Plate Glass Industries or Automotive Finishes Division of E. I. DuPont DeNemours and Co. Both of these companies have distributors or dealers in most principle cities.

When ordering Touch up paint from American Motors please specify the part number. When ordering from your local DuPont or Ditzler dealer, please furnish them with their paint number, color name and specify Enamel, Acrylic Lacquer or Semi-Gloss Lacquer.

Exterior colors can be determined by referring to the Paint Code stamped on the Unit Body Plate. Interior colors vary, they are keyed to the color and type of interior trim upholstery used and can only be identified by color.

SPECIAL INFORMATION

The Engine Build Code Number, Vehicle Identification Number and the information provided on the Unit Body Plate are often necessary when determining the proper replacement parts for your automobile. For their location refer to the General Information Section found at the front of this catalog.

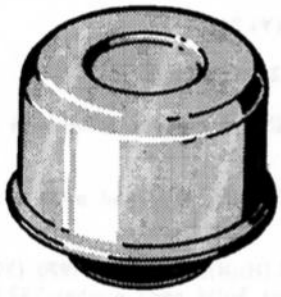

When machining Blocks or Crankshafts it sometimes becomes necessary to machine the bores .010 oversize and/or the main and/or rod bearing surfaces .010 undersize. Engines so machined have an alphabetical code affixed as follows:

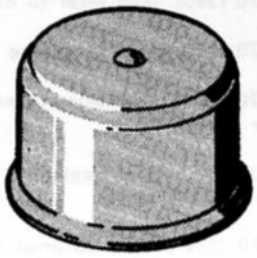

and which is interpreted as follows: P - Pins (Conn. Rod Brg. surfaces) undersize . . . M - Mains (Main Brg. surfaces) undersize . . . PM - Pins and Mains undersize . . . B - Bores oversize. CAUTION: All service Blocks and Crankshafts are standard. If your original equipment was not standard it may be necessary for you to order Pistons, Rings, Main Bearings and/or Connecting Rod Bearings to fit.

It may be necessary to determine whether a car is equipped with (LSFC) Less Sealed Oil Filler Cap,

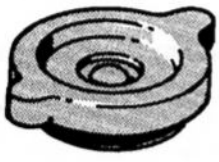

SIX (LSFC)

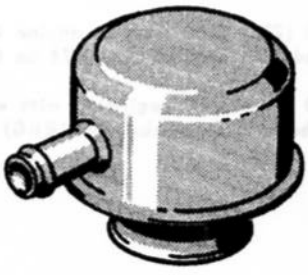

V8 (LSFC)

or (WSFC) with Sealed Oil Filler Cap.

SIX (WSFC)

V8 (WSFC)

SPECIAL INFORMATION

The Engine Build Code Number, Vehicle Identification Number and the information provided on the Unit Body Plate are often necessary when determining the proper replacement parts for your automobile. For their location refer to the General Information Section found at the front of this catalog.

.....

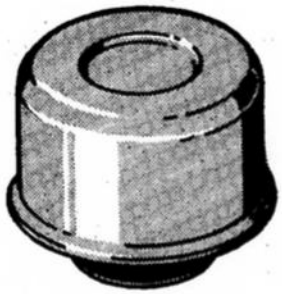

It is often necessary to identify both the make and the model of your Carburetor to assure obtaining the proper components for it. This information is usually stamped either on the Carburetor itself or on a metal tag attached to it. In some cases Carburetor Identification Tags have nine (9) digits, be guided only by the first four (4) digits as to identification of your Carburetor.

.....

American Motors offers many replacement parts which will fit other manufacturers automobiles. To allow you to select American Motors Carburetors and Carburetor components corresponding to Vendors part numbers we have supplied, at the end of this section of pages, a Vendor to American Motors Cross Reference List.

.....

It may be necessary to determine whether a car is equipped with (LSFC) Less Sealed Oil Filler Cap,

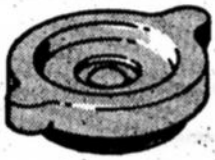

SIX (LSFC)

V8 (LSFC)

or (WSFC) with Sealed Oil Filler Cap.

SIX (WSFC)

V8 (WSFC)

SPECIAL INFORMATION

The Engine Build Code Number, Vehicle Identification Number and the information provided on the Unit Body Plate are often necessary when determining the proper replacement parts for your automobile. For their location refer to the General Information Section found at the front of this catalog.

Illustrated is the general location of the rear axle Ratio Tag used on all cars except 70 thru 72 10-80. These cars have a stamped code on the cover flange. "A" is 11/39, "B" is 13/41, "C" is 15/43, "D" is 11/43, "E" is 12/43, "F" is 13/40, "G" is 13/43, "H" is 15/41, "J" is 19/45. This information is necessary to determine the proper components of your rear axle.

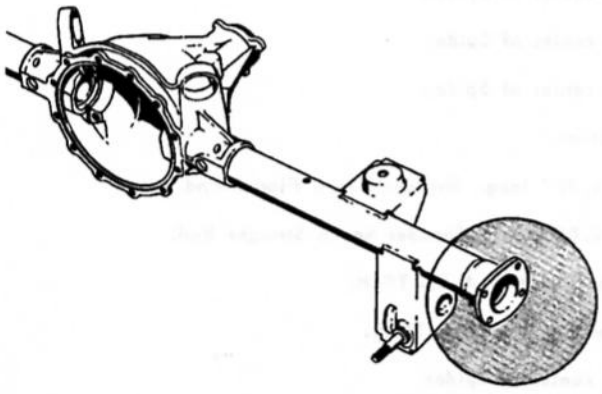

01 (SIX), 70 (SIX)

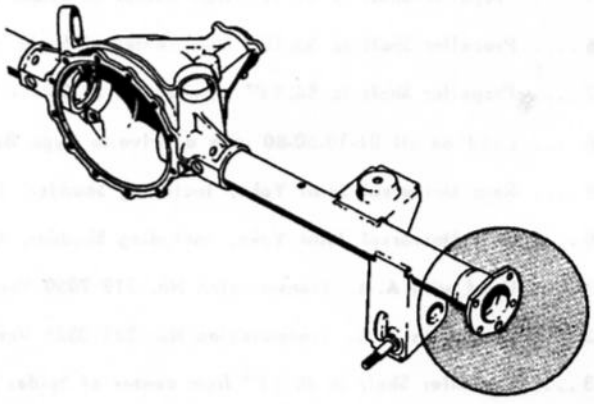

01 (V8), 30 (V8), 70 (V8), 10, 50, 80

Locking Differential or 'Twin Grip' equipped rear axles can be identified by the presence of a metal tag, so stating, attached to the cover filler plug as shown. This fact should be determined prior to seeking components of rear axles.

SPECIAL INFORMATION

The Engine Build Code Number, Vehicle Identification Number and the information provided on the Unit Body Plate are often necessary when determining the proper replacement parts for your automobile. For their location refer to the General Information Section found at the front of this catalog.

Illustrated are the locations of the two pertinent code numbers usually found on all leaf springs. This information is necessary to assure obtaining the proper replacement springs or components.

The rear coil spring can be identified by the A.M. Part No. stamped at either of the above locations or a white or yellow plastic tape located in center of spring with a full number or last three digits. The 1970 and 1971 front springs can be identified by a white or yellow plastic tape located in center of spring with a full number or last three digits.

SPECIAL INFORMATION

The Engine Build Code Number, Vehicle Identification Number and the information provided on the Unit Body Plate are often necessary when determining the proper replacement parts for your automobile. For their location refer to the General Information Section found at the front of this catalog.

This illustration points out the general location of the Transmission Identification Tag which carries the Vendor Part Number. This information is necessary to determine the proper components of your transmission.

Illustrated is the general location of the rear axle Ratio Tag used on all cars except 70 10-80. These cars have a stamped code on the cover flange. "A" is 11/39, "B" is 13/41, "C" is 15/43, "D" is 11/43. This information is necessary to determine the proper components of your transmission.

SPECIAL INFORMATION

This Standard Parts Group contains all Standard Parts listed in American Motors Automotive Parts Division Parts Catalogs.

Every major type of Standard Part has been assigned a group number. These groups are listed in numerical sequence.

To aid in locating the group listing, we have included an Alphabetical Index.

Each individual group has its parts listed in part number sequence.

Since many common standard parts are readily available locally, American Motors does not supply them for service. In the column immediately following each part number, a service status code is listed. An SS indicates the part is Supplied for Service. Parts listed with a code of NA are Not Available from American Motors and must be obtained locally.

All dimensions used in this catalog are in inches.

For convenience, various codes have been used in the group listings. A list of these codes and their meanings are found below as well as in the Abbreviations Index located at the front of the catalog.
